Surround Technologies Introduces Accelerator™ for .NET Version 3.2

Bloomfield, NJ – January 18, 2012 – Surround Technologies announces the release of its Accelerator™ for .NET version 3.2 available immediately, with features that provide even greater productivity to users and functionality for business needs. “We understand the urgency of businesses to develop new applications to support their business, and, in some cases, to modernize the legacy applications that aren’t keeping up with today’s demands. We continue to offer more features and functionality for the business, while staying true to our methodology that allows for fast development and better architecture,” said Lee Paul, CEO of Surround Technologies.

The addition of the features highlighted in this release began with existing clients. Derek Maciak, the firm’s CTO remarked, “The most exciting part of our engagements comes when we work closely with our clients to understand how they will use the applications they’re developing. While many choose to use the standard out-of-the-box features, our ability to create new custom features to meet their specific needs is an added benefit.”

Some of the newest features being released in this version include:

Mobile Signature Capture [Media Attached Page 3: [sigcap.PNG](#)]

The Mobile Signature Capture application is a device-independent web application built for use with touch based interfaces, such as iPad, iPhone, Android and more, allowing the capture and storage of customer signatures or other written input. This application can be controlled remotely from the desktop application, so that the desktop user can see what a particular tablet is doing and take over control when needed. The capture application is able to show content to users, and includes a control which lets the user sign their name or other text and send it to the desktop application, where it is converted to a PDF document and stored.

Attachment Manager

The Attachment Manager allows users to upload and attach files to specific records in their systems, to an application or application module, or to the system. The files are uploaded to a storage server where they are accessible from other devices and computers running the application. The plug-in can be added to any Accelerator-based application and used without any coding. Future releases of the Attachment Manager will allow managing and attaching websites, email addresses, and even other records together.

Surround Technologies Introduces Accelerator™ for .NET Version 3.2

Accelerator PowerGrid Improvements [Media Attached Page 4: powergrid.PNG]

The new Accelerator PowerGrid enables flexible and powerful data grid capabilities, incorporating the ability to work with multiple items at the same time with an Excel-like familiarity in both user experience and interface. Some advanced features of Accelerator PowerGrid include:

- Grid support for databinding and Services Oriented Architecture
- Enhanced edit capabilities and cell at a time updates to the database
- Copy and paste to and from an Excel spreadsheet and the Accelerator PowerGrid
- Copy and paste between rows or columns within the grid
- Mass auto creation of new grid row entries based on copied features of other rows
- Automatic user feedback of validation rules
- Dynamic column freezing
- Cell and row highlighting
- Many grid display and organization capabilities
- Loading options for desired scrolling and data manipulation

Filter Functionality [Media Attached Page 5: filter.PNG]

The Accelerator Filter provides another way for a user to further narrow their search for necessary information with the added benefit of not losing or changing their current search result set. By finding the information quicker, they perform their task quicker. The Filter box is nested at the top right of all content windows and automatically filters the results as the user types, showing the user only what is relevant to their criteria. The current data set is filtered in memory and data that matches appears with the filter text highlighted; any records not matching the filter text are hidden from view. The Accelerator Filter includes the ability to use wild cards and can narrow their matches by single terms or phrases by grouping words with quotation marks. The window will reflect total number of records in the original data set and the number of records that match the filter criteria. Filtered results can be easily exported for reporting and other uses. [Media Attached Page 6: excelexport.PNG]

Multi Level TreeGrid

The Accelerator Multi Level TreeGrid is the combination of standard Tree and Grid controls, expanding the features of both to allow the user to view hierarchical data in a grid-like structure. The grid data can be expanded or collapsed like a standard tree control and data can be sorted by column headers as would be expected in standard grid data. Rows which are logical children will be collapsed and expanded in tandem with their parent row(s). Multiple data columns can be defined and are horizontally aligned by default.

About Surround Technologies:

Surround Technologies develops highly usable software tools that accelerate custom application development for IBM System i, Windows, Unix and Linux Platforms. With offices in Bloomfield, NJ and Fort Myers, Florida, Surround provides software products and professional services that help enterprises around the world produce advanced agile software. Surround Technologies' Envision products appeal to companies large and small, and are in use modernizing applications at leading companies like Gannett, Verizon, & General Electric. More information available at www.SurroundTech.com.
