

Surround Announces Support for LANSAs Version 12.0

Bloomfield, NJ – March 10, 2010 – Surround Technologies now has Version 7.8 of Accelerator™ for Visual LANSAs generally available. Version 7.8 includes full support for Visual LANSAs 12.0.

Surround Technologies tests Accelerator™ for Visual LANSAs with each LANSAs release to continually and always support the latest LANSAs version. “Many LANSAs customers have come to rely on the productive frameworks from Surround. Our support of the latest LANSAs release provides great value to them. They know that if we support it, then their applications will work as well saving them a significant amount of time and money in testing.” states Derek Maciak, CTO of Surround.

“Using a very structured approach to programming, Surround Technologies has built many tools that utilize the LANSAs environment. Additionally, we continue to make tremendous strides in integration, especially with Microsoft Office, .Net development, and Azure Cloud technologies.” continues Maciak.

More information about Accelerator for Visual LANSAs is available online at www.SurroundTech.com or through any of Surround’s offices.

About Surround Technologies

Surround Technologies provides products and consulting services to accelerate software development, specifically the development of mature SOA applications, allowing developers to more efficiently produce cutting-edge, sophisticated applications that integrate to the latest technologies. Surround development solutions, in use by companies such as Verizon, GE, and Gannett, are products to provide developers with more productive development methods to produce higher-quality solutions and accelerate adoption of new technology. When it comes to business software development, Surround Technologies make it possible to have “more, better, faster” and develop and run “Software at the Speed of Business™.” For more information, visit www.SurroundTech.com.
